

OUR COMMUNITY NEEDS

Our community needs projects that will bring us safe, secure, clean water and will protect us from climate change. That's why I call on LA County to prioritize these goals for the Safe Clean Water Program, as they continue to make program improvements and project investments:

- Offering as many benefits as possible that meet the needs identified by communities. Community benefits include equitable access to increased shade, cooler temperatures, good green jobs, recreational opportunities, and more.
- Replacing unused pavement and other hard surfaces with increased quality green space, like parks and wetlands, especially on school campuses and in park poor communities.
- Listening to community voices and fostering community leadership in Safe, Clean Water Program projects, and in the program process.
